

Clinical Research Associate

Novasys Medical is dedicated to the development of innovative therapies in women's health. Our Company has developed a non-surgical approach to treat stress urinary incontinence (SUI), for the millions of women who experience this common problem.

Our Clinical Research Associate will work closely with the Medical Director and with a small team of dedicated professionals to support our scientific and clinical mission by collecting, analyzing and summarizing clinical data as it pertains to the marketing and sales functions.

Responsibilities will include using your skills to develop and implement specific study plans, participate in and conduct visits and meetings with investigative sites, physicians and consultants, support the development of technical product literature, act as liaison with site managers involved in clinical trials and preparing comparative analyses of Renessa® with other products.

If you are a high-energy, detail oriented professional with excellent interpersonal and communication skills, prior experience in medical device clinical research, and enjoy working with high energy professionals, you can contribute significantly to our growing company in this highly visible position.

Preferred skills and experience:

- Can do attitude
- Team building and team contribution
- Flexible and adaptive mindset
- Masters degree in Health, Life Sciences or Biomedical Engineering
- RN preferred
- Experience with registries, clinical protocol creation, IRBs, site initiation, monitoring and closure
- Experience with scientific library research and technical writing required
- Knowledge of basic statistics and data analysis methods
- The ability to assist in preparation of professional level presentations
- Solid Microsoft Excel Word and PowerPoint skills
- Prior experience in medical device or pharmaceutical company
- Excellent written and oral communication skills
- Ability to travel up to 25%
